

Massachusetts General Hospital - Orthopedics

Patient: John Smith (PAT-770231)

DOB: 1965-04-22

Date of Visit: 2026-09-15

Assessment:

Patient presents with chronic lower back pain. MRI reveals degenerative disc disease at L4-L5. No history of trauma. Denies any radiculopathy symptoms.

Medications:

Ibuprofen 600mg, three times daily, continue home medications.

Gabapentin 300mg, start new medication for nerve pain.

Plan:

Recommend lumbar epidural steroid injection (CPT 62323).

Diagnosis: M51.36, other intervertebral disc degeneration, lumbar region.

Failed 6 months of physical therapy and NSAIDs.
